

National Summary for Article 17 - France

1 General information

1.1 Number of SCIs and SACs

The table below provides the total number and total area of sites proposed and designated under the Habitats Directive (Sites of Community Importance, SCIs & Special Areas of Conservation, SACs), terrestrial area of sites and number and area of marine sites (i.e. any site with a marine component).

Empty cells in tables mean that the component requested is not applicable.

	All		Terrestrial	Marine	
	No.	Area (km ²)	Area (km ²)	No.	Area (km ²)
SCIs & SACs	1367	74537	46832	207	27705
SACs only	713	28055	23528	33	4527
Date of database used: 30-04-2013					

1.2 Number of sites with comprehensive management plans (Art. 6(1))

Number of sites for which comprehensive management plans have been adopted: **591**

Percentage of network area covered by comprehensive management plans: **76%**

Number of sites for which management plans are under preparation (optional): **264**

2. Number of habitats and species/subspecies

The table in this section gives the number of habitat types and species/subspecies in each Annex of the Habitats Directive by biogeographical and marine regions in France. The species and habitats with the following presence status are included in the table: 'present', species of which taxonomy is not clear (SR TAX), species where the link to the corresponding name in the Habitats Directive is not clear (LR), species extinct after the Directive came into force (EX) and optional reports (OP).

Region	HABITATS		SPECIES						
	Annex I		Annex II		Annex IV		Annex V		
	Non-priority	Priority	Non-priority	Priority	Including those in Annex II	Excluding those in Annex II	Including those in Annex II	Excluding those in Annex II	
Number of habitats & species in the MS	102	28	133	24	204	90	68	57	
	130		157		204		68		
Alpine	50	14	61	6	97	50	42	39	
Atlantic	56	16	67	10	99	46	35	28	
Continental	50	14	73	5	99	50	45	39	
Mediterranean	66	18	76	12	119	53	30	26	
Marine Atlantic	6		4	3	17	12	4	2	
Marine Mediterranean	6	1	1	2	14	11	4	4	

Additional information:

Number of assessments of marginal habitat types: **7**

Number of assessments of marginal & occasional species: **36**

Number of assessments of newly arriving species: **none**

Number of species regionally extinct prior the Habitats Directive came into force: **1**

Number of species regionally extinct after the Habitats Directive came into force: **none**

Number of species globally extinct after the Habitats Directive came into force: **none**

Number of assessments of species/habitat types for which no reports received: **none**

3. Information on Conservation status

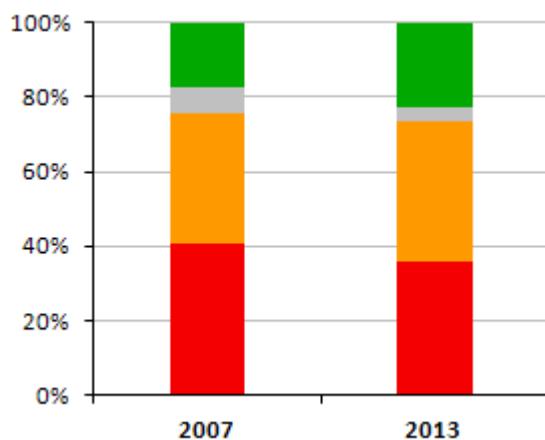

Please note that the figures shown for 2001-2006 and 2007-2012 are not necessarily directly comparable because there can be differences in number of assessments between the reporting rounds, changes in how some features were allocated in biogeographical regions etc.

The following have been excluded from all statistics under section 3:

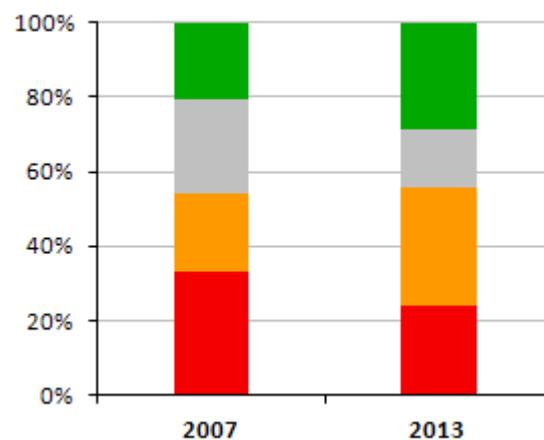

- Habitats reported as marginal (MAR) or with scientific reserve (SR)
- Species reported as marginal (MAR), occasional (OCC), newly arriving (ARR), regionally extinct before the Habitats Directive came into force (PEX) and introduced species (INT). In addition reports that give only an information about species without evaluation of the conservation status
- Redundant reports provided for both marine and terrestrial regions for habitats and species and species for which only one, either terrestrial or marine report was expected (IRM).

3.1 a) Overall assessment of conservation status of habitats and species (%)

These figures show the percentage of biogeographical assessments in each category of conservation status for habitats and species, respectively. The information on which these figures are based are presented in the table below the figures (real values).

Conservation status of **habitats**

Conservation status of **species**

■ FV - Favourable ■ NA - Not reported ■ XX - Unknown ■ U1 - Unfavourable inadequate ■ U2 - Unfavourable bad

Year of assessment	HABITATS					SPECIES				
	FV	NA	XX	U1	U2	FV	NA	XX	U1	U2
2007	53		20	106	124	137		164	138	219
2013	67		11	113	106	193	1	107	216	163

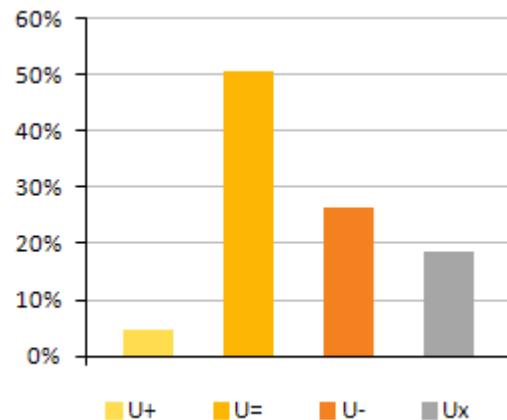

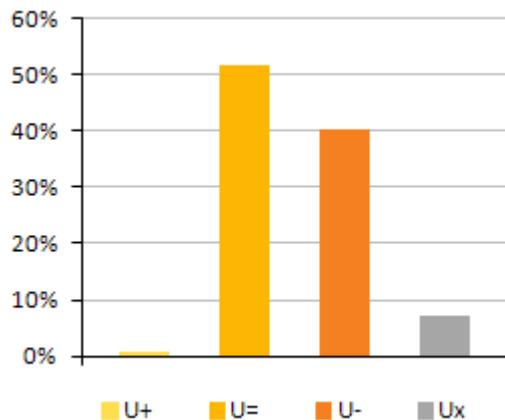

3.1 b) Percentage of assessments where the conservation status has changed between the reporting periods

This table shows the percentage of assessments where the Member State has indicated a change between two reporting rounds (2001-2006 and 2007-2013) and the percentages of all reported changes where the change has been reported as a genuine change. Change can be either a change from one conservation status category to another or a change within the same category (within the qualifiers ‘-’, ‘+’. ‘=’, ‘x’). Data have been taken from the ‘audit trail table’ where the Member State indicates the nature of change. The Member State’s results on this audit trail are shown under section 7.

	SPECIES	HABITAT TYPES
% of assessments that changed	41%	31%
% of total changes considered genuine	7%	2%

3.2 Improving/deteriorating trends of habitats and species with an unfavourable conservation status (%)

These figures show the proportion of unfavourable assessments (U1 & U2) which are improving, deteriorating, stable or unknown.

Habitats – overall trend in Conservation Status

Species – overall trend in Conservation Status

U (+) = unfavourable (inadequate and bad) improving, U (=) = unfavourable stable, U (-) = unfavourable declining, U (x) = unfavourable unknown trend

This table shows trends in conservation status of habitats & species separately for those cases where the overall conclusion is unfavourable inadequate (U1) and unfavourable bad (U2).

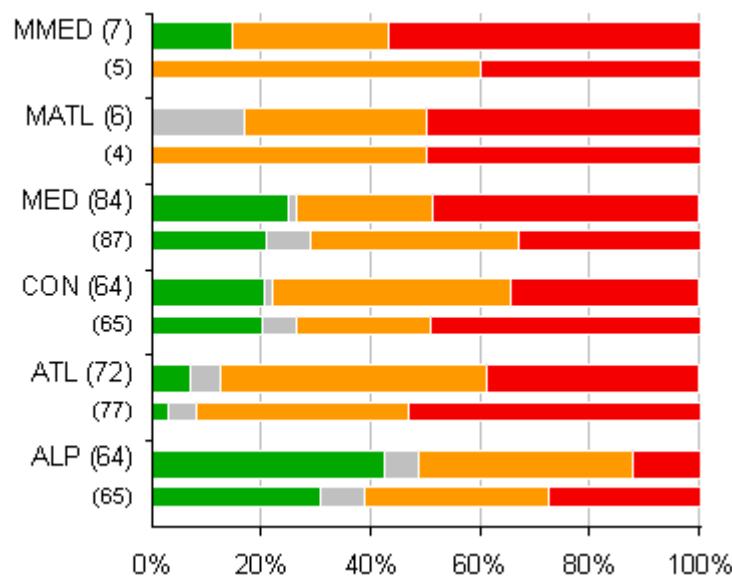

Qualifiers of CS	U1+	U1=	U1-	U1x	U2+	U2=	U2-	U2x
Habitats	2	79	22	10		34	66	6
Species	12	133	22	49	5	58	78	21

Note: U1+ = unfavourable-inadequate improving, U1= = unfavourable-inadequate stable, U1- = unfavourable-inadequate declining, U1x = unfavourable-inadequate trend unknown, U2+ = unfavourable-bad improving, U2= = unfavourable-bad stable, U2- = unfavourable-bad declining, U2x = unfavourable-bad trend unknown

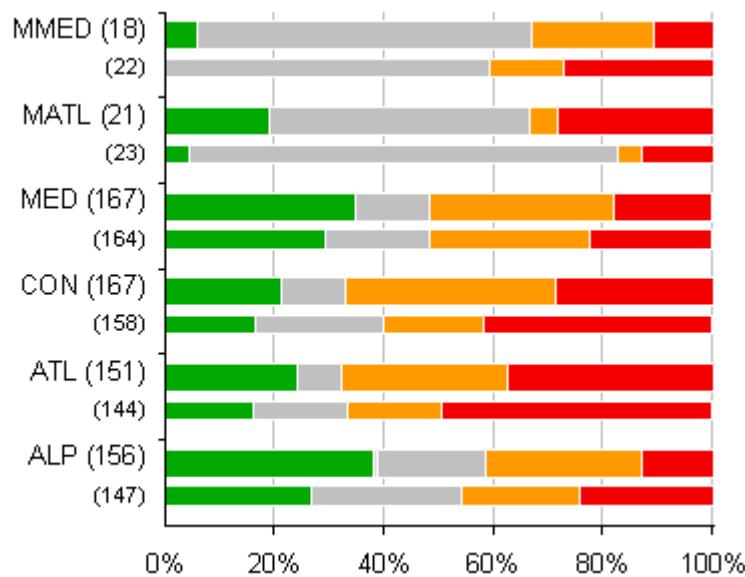

3.3 Overall assessment of conservation status of habitats and species by biogeographical/marine region (%)

These figures show the percentage of assessments in each of conservation status category by biogeographical and marine region, for habitats and species, respectively.

Please note that some habitats reported as terrestrial in 2001-2006 have been reported as marine in 2007-2012 (e.g. estuaries). Some species (e.g. seals, marine turtles) which in some cases were reported for both marine and terrestrial regions were only reported for one region in 2007-2012 (this statement only applies to Member States with marine regions).

Conservation status of **habitats** in biogeographical and marine regions

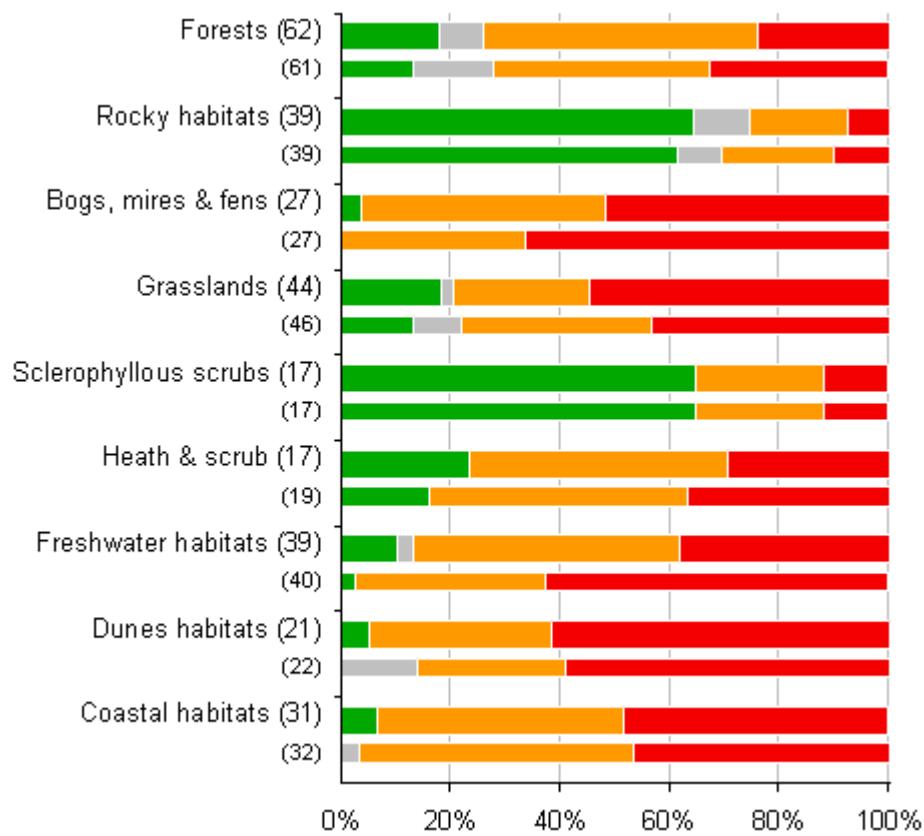

Conservation status of **species** in biogeographical and marine regions

Note: wide bar corresponds to the 2007-2012 reporting period, and the narrow bar to the 2001-2006 reporting period. The number in brackets corresponds to the number of biogeographical assessments in the category.

3.4 Overall assessment of conservation status by habitat category/species group (%)

These figures show the percentage of biogeographical and marine assessments in each conservation status category by habitat category and by taxonomic group, for habitats and species, respectively.

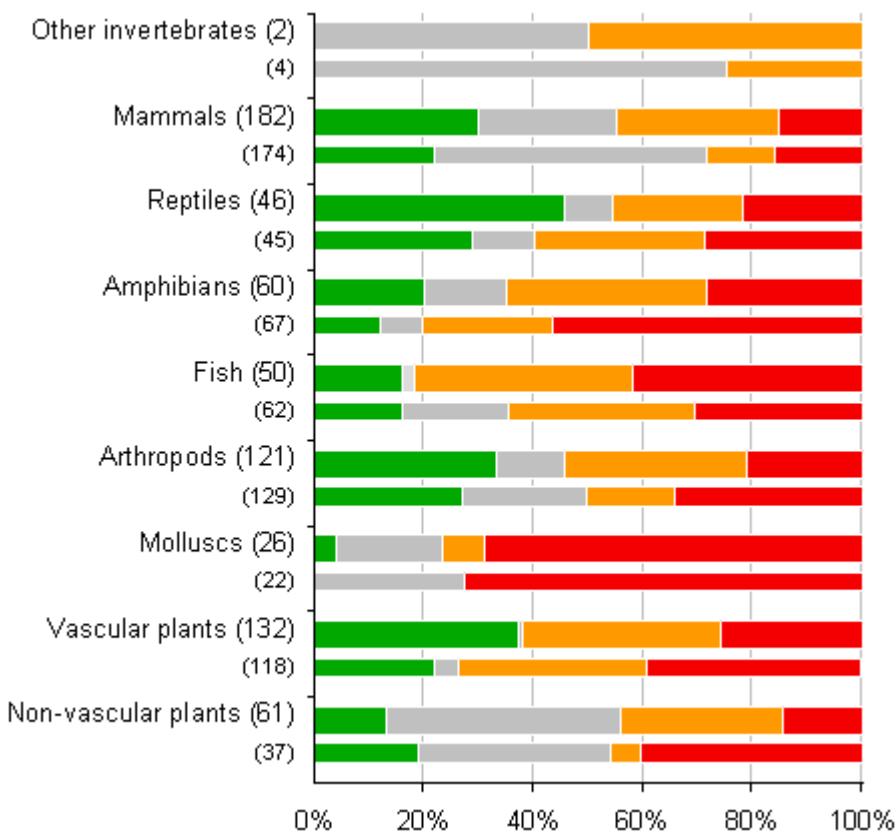

The figures show the proportion of assessments in each conservation status class for 2007-2012 (upper bar) and 2001-2006 (lower bar). The information (number of assessments) on which these figures are based are presented in the tables below each figure (real values).

HabitatsConservation status of **habitats** in biogeographical and marine regions

Note: wide bar corresponds to the 2007-2012 reporting period, and the narrow bar to the 2001-2006 reporting period. The number in brackets corresponds to the number of biogeographical assessments in the category.

Group	Year of assessment	HABITATS				
		FV	NA	XX	U1	U2
Forests	2007	8		9	24	20
	2013	11		5	31	15
Rocky habitats	2007	24		3	8	4
	2013	25		4	7	3
Bogs, mires & fens	2007				9	18
	2013	1			12	14
Grasslands	2007	6		4	16	20
	2013	8		1	11	24
Sclerophyllous scrubs	2007	11			4	2
	2013	11			4	2
Heath & scrub	2007	3			9	7
	2013	4			8	5
Freshwater habitats	2007	1			14	25
	2013	4		1	19	15
Dunes habitats	2007			3	6	13
	2013	1			7	13
Coastal habitats	2007			1	16	15
	2013	2			14	15

NB: Coastal habitats cover coastal and halophytic habitats (code 1xx) and Dunes habitat types cover coastal sand dunes and inland dunes (code 2xx) as listed in the Habitats Directive

SpeciesConservation status of **species** in biogeographical and marine regions

Note: wide bar corresponds to the 2007-2012 reporting period, and the narrow bar to the 2001-2006 reporting period. The number in brackets corresponds to the number of biogeographical assessments in the category.

Group	Year of assessment	SPECIES				
		FV	NA	XX	U1	U2
Other invertebrates	2007			3	1	
	2013			1	1	
Mammals	2007	38		86	22	28
	2013	54		46	54	28
Reptiles	2007	13		5	14	13
	2013	21		4	11	10
Amphibians	2007	8		5	16	38
	2013	12		9	22	17
Fish	2007	10		12	21	19
	2013	8	1		20	21
Arthropods	2007	35		29	21	44
	2013	40		15	40	26
Molluscs	2007			6		16
	2013	1		5	2	18
Vascular plants	2007	26		5	41	46
	2013	49		1	48	34
Non-vascular plants	2007	7		13	2	15
	2013	8		26	18	9

3.5 Reasons for change in reported values of parameters (%)

This table provides information on reasons for changes of values reported for the parameters 'Range', 'Area (habitat)', 'Population' and 'Habitat for the species' between reporting periods 2001-2006 and 2007-2012. The table gives the percentage of habitats/species assessments for which a particular reason for change in values was reported. The reporting format lists three principal reasons for change: genuine change, better knowledge/data and use of different method.

Reason for change	Habitats		Species/subspecies		
	Surface area of range	Surface area of habitat	Surface area of range	Population size	Area of habitat for the species
Genuine change	4	7	19	27	21
Better knowledge/data	63	54	70	60	50
Use of different method	82	51	42	31	25

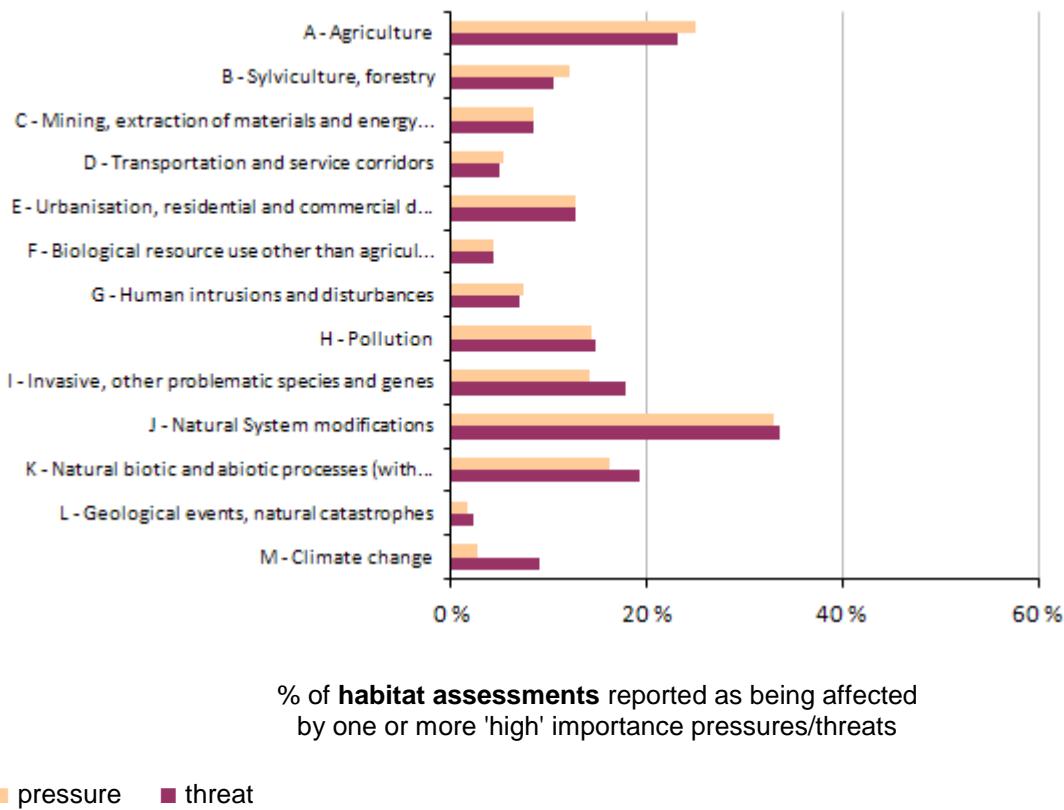

Note: More than one reason for change can be reported for each habitat and species.

4 Frequency of main pressures and threats (%) ¹

This section provides information on the relative importance of pressures and threats (aggregated to level 1) reported for habitats and species. The figures show the percentage of biogeographical assessments reported as being affected by one or more pressures or threats categorised as of 'high importance'. The information for the number of pressures and threats on which these figures are based are presented in the tables below the figures.

¹ The following have been excluded:

- Habitats reported as marginal or with scientific reserve.
- Species reported as marginal, occasional, newly arriving, regionally extinct before the Habitats Directive came into force and introduced species. In addition reports that give only an information about species without evaluation of the conservation status.
- Redundant reports provided for both marine and terrestrial regions for habitats and species and species for which only one, either terrestrial or marine report was expected.

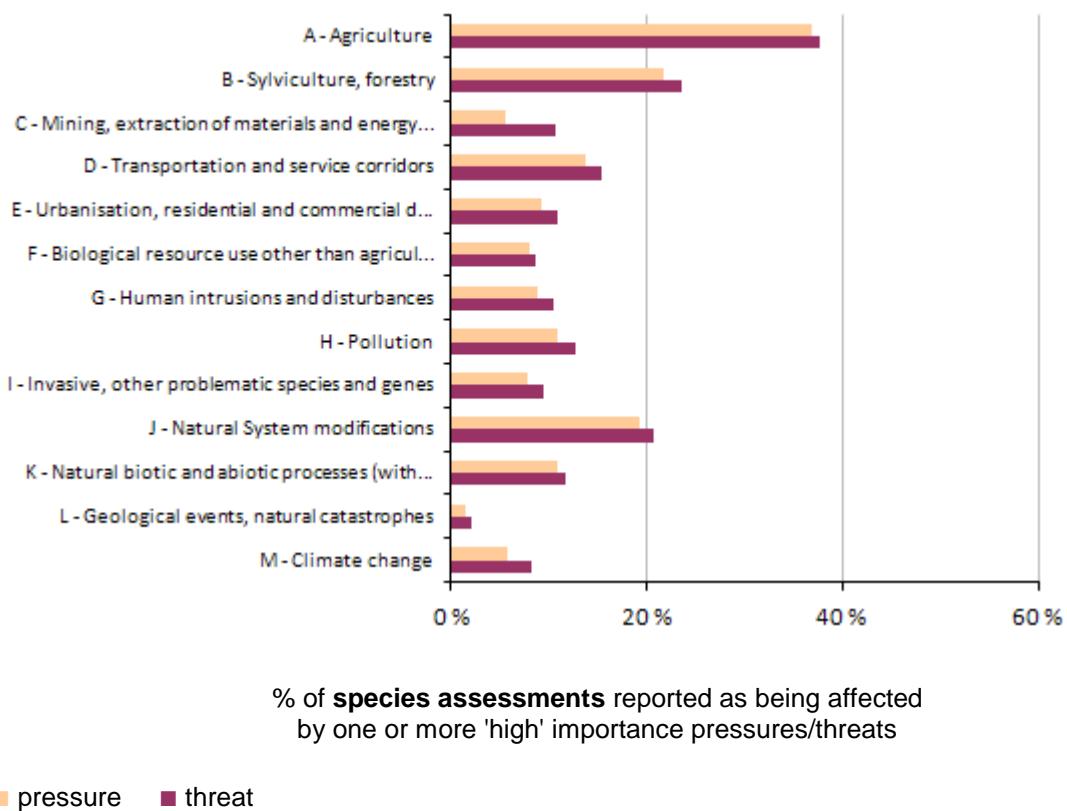

Note: Threats and pressures categories not reported are omitted.

Total number of assessments considered in the calculation: **297**

Number of assessments with no high ranking threats (or no threats at all reported): **84**

Number of assessment with no high ranking pressures (or no pressures at all): **95**

Pressures and threats	HABITATS	
	Number of threats	Number of pressures
A - Agriculture	69	74
B - Sylviculture, forestry	31	36
C - Mining, extraction of materials and energy production	25	25
D - Transportation and service corridors	15	16
E - Urbanisation, residential and commercial development	38	38
F - Biological resource use other than agriculture & forestry	13	13
G - Human intrusions and disturbances	21	22
H - Pollution	44	43
I - Invasive, other problematic species and genes	53	42
J - Natural System modifications	100	98
K - Natural biotic and abiotic processes (without catastrophes)	57	48
L - Geological events, natural catastrophes	7	5
M - Climate change	27	8

Note: Threats and pressures categories not reported are omitted.

Total number of assessments considered in the calculation: **680**

Number of assessments with no high ranking threats (or no threats at all reported): **186**

Number of assessment with no high ranking pressures (or no pressures at all): **214**

Pressures and threats	SPECIES	
	Number of threats	Number of pressures
A - Agriculture	256	251
B - Sylviculture, forestry	160	148
C - Mining, extraction of materials and energy production	73	38
D - Transportation and service corridors	105	94
E - Urbanisation, residential and commercial development	74	63
F - Biological resource use other than agriculture & forestry	59	55
G - Human intrusions and disturbances	72	60
H - Pollution	86	74
I - Invasive, other problematic species and genes	64	54
J - Natural System modifications	141	131
K - Natural biotic and abiotic processes (without catastrophes)	80	74
L - Geological events, natural catastrophes	14	10
M - Climate change	56	40

5 Natura 2000 coverage and conservation measures ²

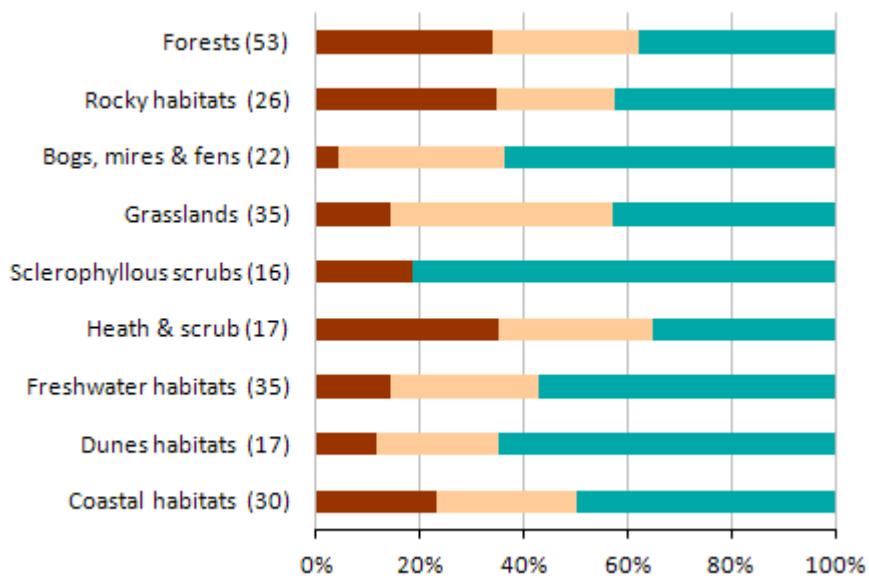

Note: The figures under section 5 cover only Annex I habitat types and Annex II species.

5.1 Natura 2000 coverage (%)

This section presents statistics on the coverage of Annex I habitats and Annex II species in Natura 2000 sites by habitat category/species group. These figures show the percentage of habitats/species assessments in three classes based on coverage by Natura 2000 sites, for habitats and species, respectively. The geometric mean is used if Member States have reported minimum and maximum values. The information for the number of assessments per coverage by Natura 2000 on which these figures are based are presented in the tables below the figures (real values). Please note that these statistics are based on Article 17 data and are independent from the results of the Biogeographical Seminars.

² The following have been excluded:

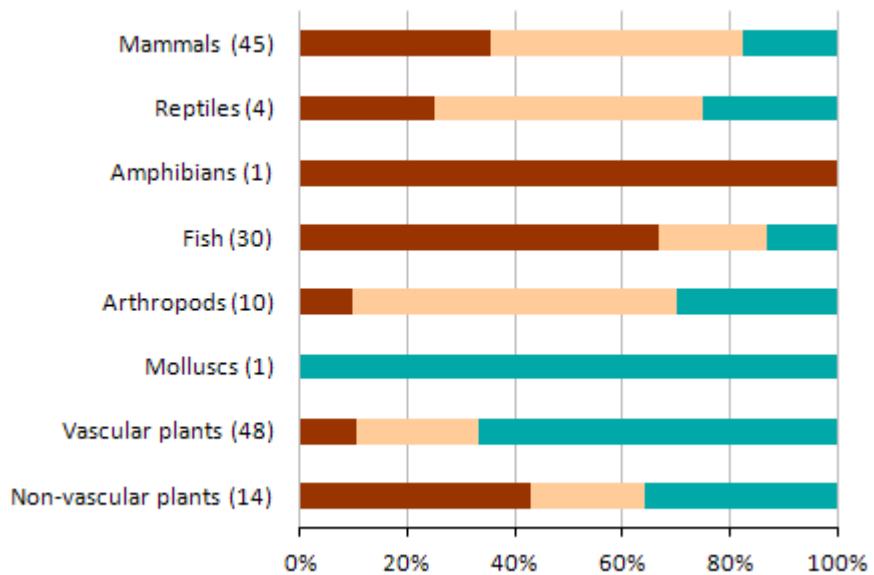

- Habitats reported as marginal or with scientific reserve.
- Species reported as marginal, occasional, newly arriving, regionally extinct before the Habitats Directive came into force and introduced species. In addition reports that give only an information about species without evaluation of the conservation status.
- Redundant reports provided for both marine and terrestrial regions for habitats and species and species for which only one, either terrestrial or marine report was expected.

% of **habitat assessments** in 3 classes of coverage by Natura 2000 sites

coverage by Natura 2000 sites : ■ 0-24% ■ 25-74% ■ 75-100%

Note: The number in brackets corresponds to the number of biogeographical assessments in the habitat category.

Group	HABITATS			
	0-24%	25-74%	75-100%	unknown
Forests	18	15	20	9
Rocky habitats	9	6	11	13
Bogs, mires & fens	1	7	14	5
Grasslands	5	15	15	9
Sclerophyllous scrubs	3		13	1
Heath & scrub	6	5	6	
Freshwater habitats	5	10	20	4
Dunes habitats	2	4	11	4
Coastal habitats	7	8	15	1

% of **species assessments** in 3 classes of coverage by Natura 2000 sites

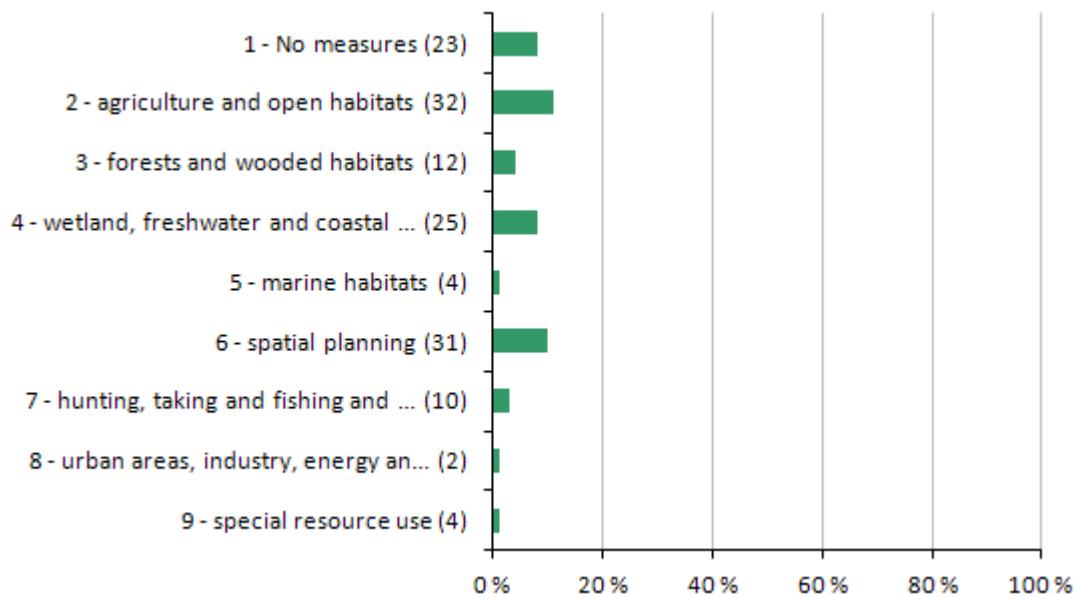

coverage by Natura 2000 sites : ■ 0-24% ■ 25-74% ■ 75-100%

Note: The number in brackets corresponds to the number of biogeographical assessments in the species category.

Group	SPECIES			
	0-24%	25-74%	75-100%	unknown
Mammals	16	21	8	18
Reptiles	1	2	1	11
Amphibians	1	0	0	11
Fish	20	6	4	12
Arthropods	1	6	3	72
Molluscs	0	0	1	14
Vascular plants	5	11	32	26
Non-vascular plants	6	3	5	3

5.2 Main conservation measures (%)

This section provides information on the relative importance of conservation measures at level 1 implemented during the reporting period 2007-2012 for Annex I habitats and Annex II species. The figures show the percentage of biogeographical assessments for which one or more 'high importance' conservation measures was implemented. Measures not reported are omitted.

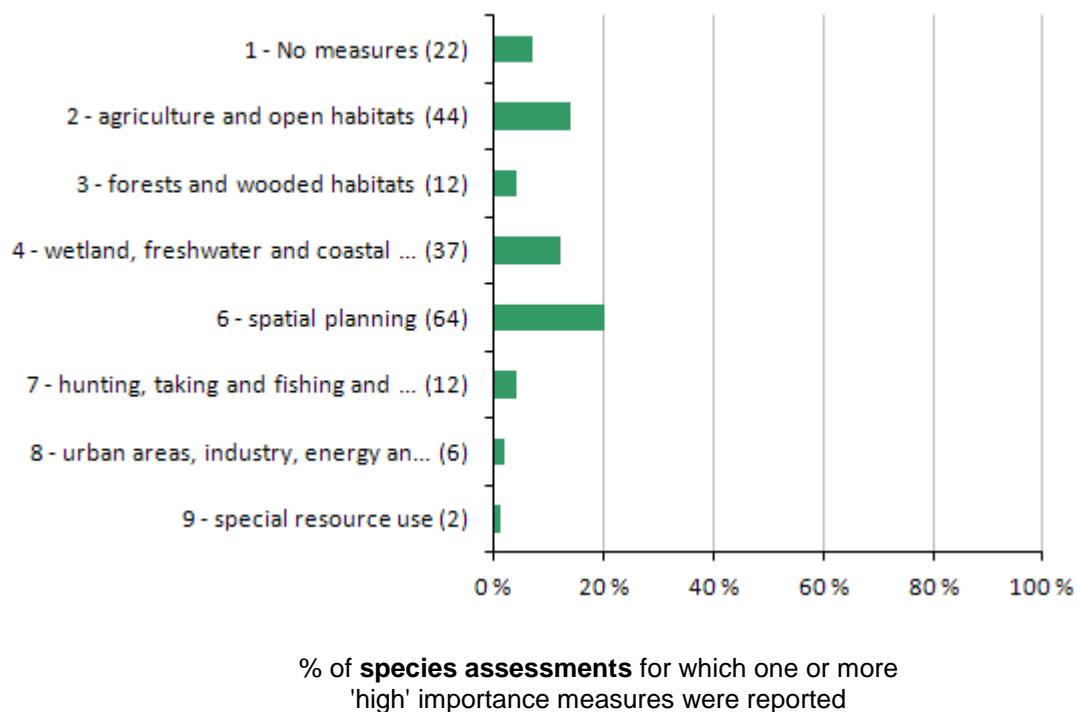

% of **habitat assessments** for which one or more
'high' importance measures were reported

Note: Numbers in brackets correspond to the number of assessments where measure 1, 2, etc. is noted as being of high importance. Occasional and extinct habitat types have been included in calculations.

Total number of assessments considered in the calculation: **297**

Number of assessments with no high ranking conservation measures or no conservation measures at all reported: **223**

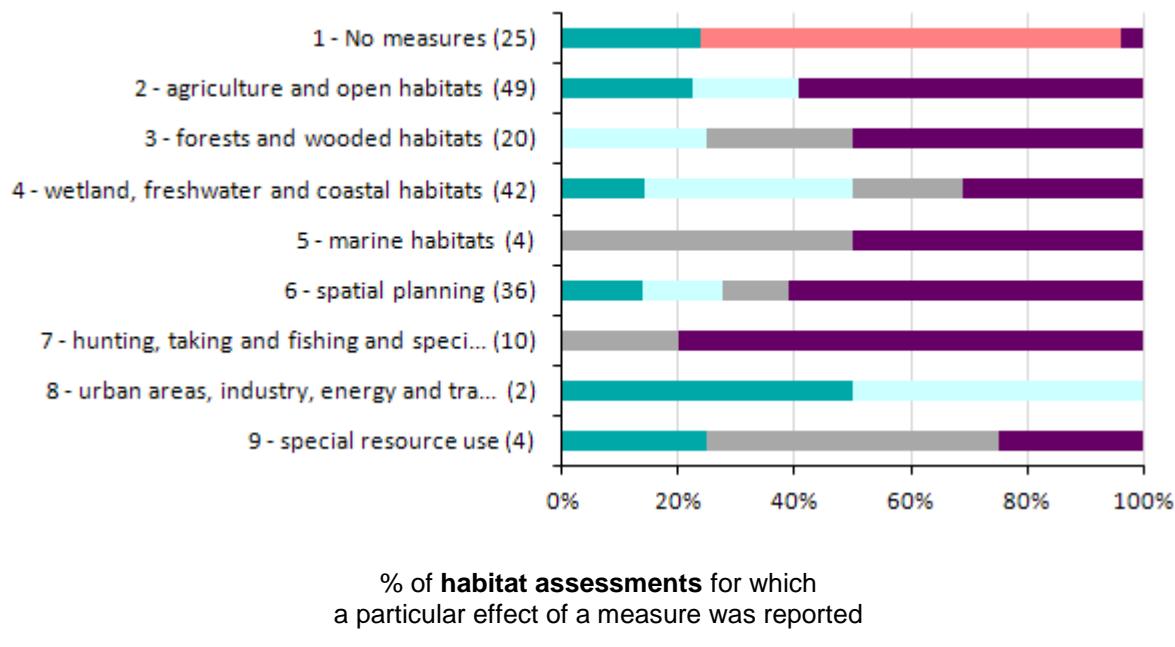

Note: Numbers in brackets correspond to the number of assessments where measure 1, 2, etc. is noted as being of high importance. Occasional and extinct species have been included in calculations.

Total number of assessments considered in the calculation: **320**

Number of assessments with no high ranking conservation measures or no conservation measures at all reported: **197**

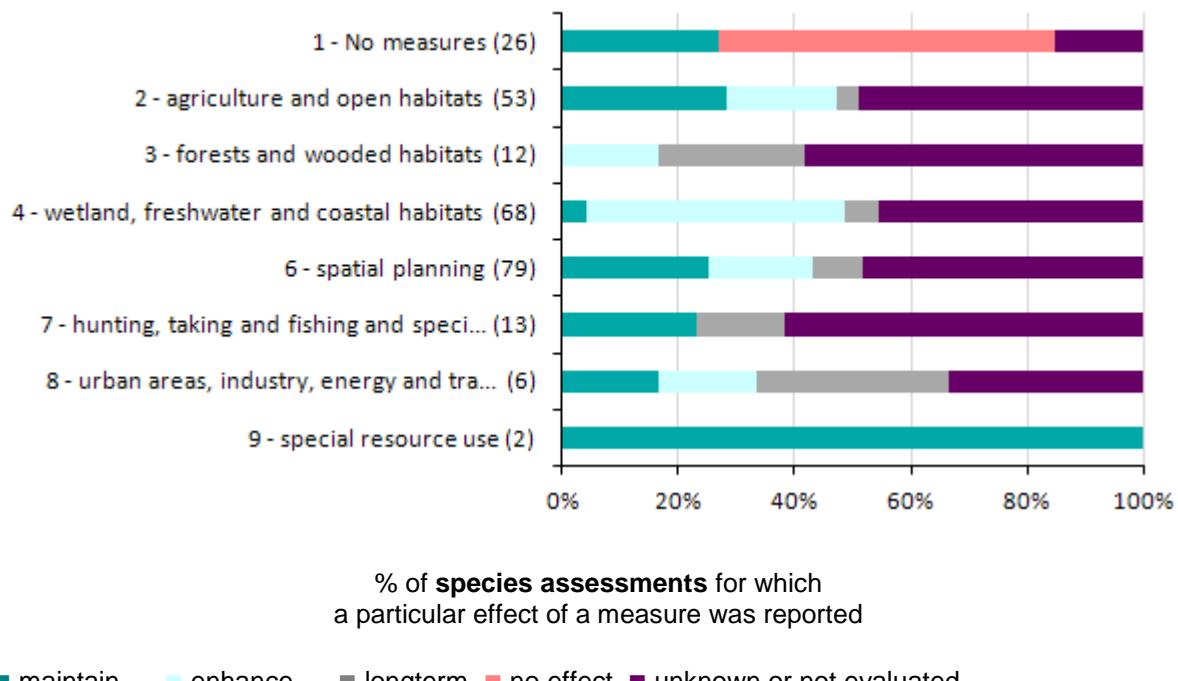

5.3 Impact of conservation measures (%)

This section provides information on the effects of implemented conservation measures for each level 1 measure category. The figures show, for each level 1 measure category, the frequency of reported effects. The information for the number of assessments per measure category on which these figures are based are presented in the tables below the figures (full names of the measures are shown in the tables).

Note: The numbers in brackets correspond to the numbers of biogeographical assessments for which one or more 'high' importance measure was reported.

Measure	HABITATS				
	maintain	enhance	longterm	no effect	unknown or not evaluated
1 - No measures	6			18	1
2 - Measures related to agriculture and open habitats	11	9			29
3 - Measures related to forests and wooded habitats		5	5		10
4 - Measures related to wetland, freshwater and coastal habitats	6	15	8		13
5 - Measures related to marine habitats			2		2
6 - Measures related to spatial planning	5	5	4		22
7 - Measures related to hunting, taking and fishing and species management			2		8
8 - Measures related to urban areas, industry, energy and transport	1	1			
9 - Measures related to special resource use	1		2		1

Note: The numbers in brackets correspond to the numbers of biogeographical assessments for which one or more 'high' importance measure was reported.

Measure	SPECIES				
	maintain	enhance	longterm	no effect	unknown or not evaluated
1 - No measures	7			15	4
2 - Measures related to agriculture and open habitats	15	10	2		26
3 - Measures related to forests and wooded habitats		2	3		7
4 - Measures related to wetland, freshwater and coastal habitats	3	30	4		31
6 - Measures related to spatial planning	20	14	7		38
7 - Measures related to hunting, taking and fishing and species management	3		2		8
8 - Measures related to urban areas, industry, energy and transport	1	1	2		2
9 - Measures related to special resource use	2				

6 Data quality and completeness ³

The aim of this section is to provide an overview of the data gaps in the report; most of these gaps are due to insufficient knowledge. This section does not refer to potential errors or technical problems in the Member State's report and concentrates on what is relevant for evaluating data completeness.

The tables give percentages of habitats/species assessments with unknown or missing information for components of conservation status and conclusions.

³ The statistics on missing information take into account that for the plant species listed in Annex V at the genus level only 'Overall assessment of conservation status' and 'Overall trend' are mandatory. The same approach was used for the species extinct after the Habitats Directive came into force.

6.1 a) Percentage of mandatory information that is missing (%)

Habitats

6.2 Methods used to estimate values or trends in Member State reports (%)

This section presents information about the quality of estimated values and trends in habitat and species biogeographical reports. For some parameters and trends, the reporting format requires an indication of which of three methods (complete survey or a statistically robust estimate, partial data with some extrapolation and/or modelling, expert opinion with no or minimal sampling) have been used to estimate the values or trends. The tables in this section present percentage of habitats/species assessments for which values were estimated by each of the three methods mentioned above.

Habitats

	Map	Range	Area	Area trend	Str.&Funct.	N2000	Average
Expert opinion (%)	3	12	16	80	85	6	34
Extrapolation (%)	65	72	74	15	14	70	52
Complete survey (%)	31	15	3	1	1	12	11
Absent data (%)	0	0	7	4	0	12	4

Species

7. List of habitats and species reported and their conservation status

This section lists habitats and species reported by the Member State and the overall conclusions on their conservation status for the reporting period 2001-2006 (indicated as 2007) and 2007-2012 (indicated as 2013). Information from the audit trail has been used for this list and its focus is on what was reported in 2013.

There are two tables for habitats and species if relevant for the Member State. The second table includes only habitats or species with a status OCC, SR, MAR etc. Please note that occurrences e.g. OCCif only reported in 2007, are included only in the second table.

In addition the list includes information provided by the Member State on the nature of change in the overall conservation status between the reporting periods.

The codes are the following :

- a = there is a genuine change: the overall conservation status improved (or deteriorated) due to natural or non-natural reasons (management, intervention, etc.)
- b1 = the change observed is due to more accurate data (e.g. better mapping of distribution) or improved knowledge (e.g. on ecology of species or habitat)
- b2 = the change observed is due to a taxonomic review: one taxon becoming several taxa, or vice versa
- c1 = the change observed is due to use of different methods to measure or evaluate individual parameters or the overall conservation status
- c2 = the change observed is mainly due to the use of different thresholds e.g. to fix Favourable reference values
- d = no information about the nature of change
- e = the change observed is due to less accurate or absent data than the one used in the previous reporting period
- nc = no change (e.g. overall trend in conservation status only evaluated in 2013 but assumed to be the same in 2007 or not known)

Habitats reported by France

Group	Name	Code	Year	ALP	ATL	CON	MATL	MED	MMED
