

Hydropower impacts on fish

Jiri Musil

HYDROPOWER IMPACTS – HABITAT CHANGES

Functional exchange pathways of matter, energy and organisms (Ward and Standford, 1995)

VS

**Ecosystem processes
Ecosystem structure**

- productivity
- dynamics
- aquatic communities

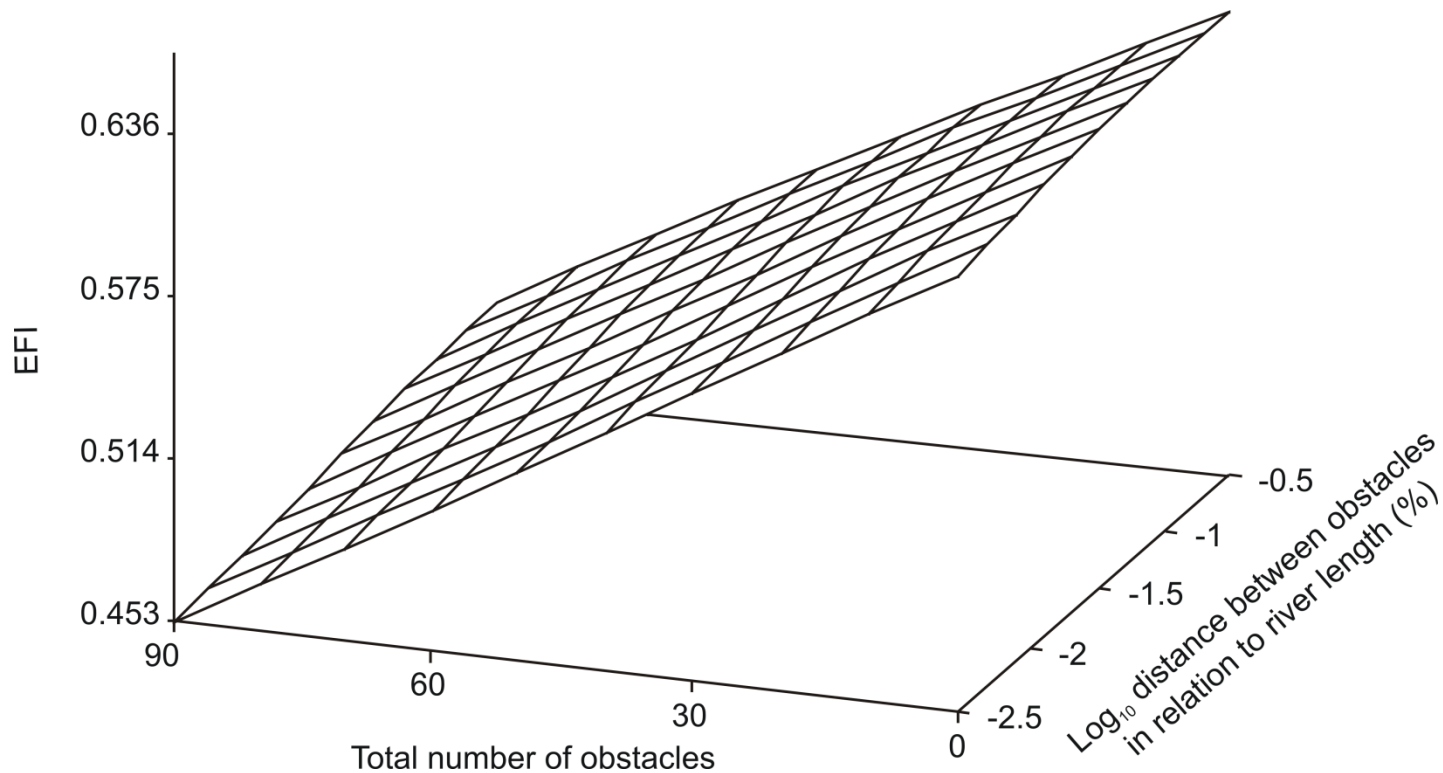

**Biodiversity loss
(e.g. Cowx et al., 2002)**

In Europe, > 74% of river systems are strongly affected (Nilsson et al., 2005)

FREE MIGRATION AS A PREREQUISITE TO IMPROVE ECOLOGICAL STATUS

Fig. 1. The relationship between river ecological status and the number of migration barriers.

Musil et al., 2012 (*Ecological Indicators*)

HYDROPOWER IMPACTS VS FISH MIGRATION

- species distribution (diadromous fishes)
- availability of vital habitats
- timing of migration (reproduction success)
- isolation in space (genetic variability)
- compensatory migration (climate change...)
- **fish injuries and/or mortality**

Viability and stability of population

CASE STUDY I – Cumulative mortality of eel in the Czech Republic (*Anguilla anguilla* L.)

CASE STUDY II – when eel met hydropower plant (migration route, turbine mortality and behavioral aspects of migration)

$$\frac{\partial q_x}{\partial t} + \frac{\partial}{\partial x} \left(\beta \cdot \frac{q_x^2}{h} + \frac{1}{2} g h^2 \right) + \frac{\partial}{\partial y} \left(\beta \cdot \frac{q_x \cdot q_y}{h} \right) + g \cdot h \cdot \frac{\partial z}{\partial x} + \frac{h}{\rho} \frac{\partial p_a}{\partial x} - \alpha \cdot q_y + \frac{1}{\rho} \left[\tau_{0x} - \tau_{px} - \frac{\partial(h \cdot \tau_{xx})}{\partial x} - \frac{\partial(h \cdot \tau_{xy})}{\partial y} \right] = 0$$

Musil et al. (in press) (*River Research and Applications*)

WHAT MEASURES ARE MOST ADEQUATE?

- Behavioural screens (louvers, electric curtains, subsonic devices, stroboscope light, etc.) expose a selective efficiency, i.e. the efficiency depends on the fish species and the local conditions.
- A high efficiency can be expected for fine screens (10 mm).
- Fish friendly turbines are available.
- Currently the design of fish protection means has to be based on a target species.
- There is a big lack of knowledge on the behaviour of fishes in front of screens, bypass intakes, turbines.
