

Structured Implementation and Information Framework (SIIF) Lithuania

Irmantas Valūnas,
Water Policy Division,
Ministry of Environment, Lithuania

SIIF WORKSHOP - BRUSSELS
25 MARCH 2015

National situation collection and dissemination of data

Collection and dissemination of data

- Yearly statistical reports on wastewater;
- Based on monitoring and permit data;
- Two ways of reporting : paper/word, pdf doc.
Or via system “AIVIKS”;
- Several stages of checking for errors and eliminating them (almost 100 QA rules);
- Final assessment is made by using other data sources.

National situation collection and dissemination of data

Current use of data

- Most of the data reported under UWWTD is also used nationally for:
 - environmental assessments;
 - publications;
 - national strategies;
 - reporting under other obligations.

National situation collection and dissemination of data

Improvements in data collection

- New legal act regarding the collection of yearly water and wastewater data went into force in 2013;
- “AIVIKS” was created to improve data collection and its publication;
- There is still allot of work to be done, to make the system function as it is supposed to.

Challenges

- Shortage of IT specialists;
- Time for processing data;
- Prolonged data verification process.

SIIF Benefits

Regarding the system :

- A good, user friendly system to inform the public on wastewater situation;
- Less administrative burden.

What is expected from the Commission as regards future SIIF development and reporting 2015-2016-2017

- Share the improvements of the SIIF platform;
- Make QA process hosted in single place (ex. EEA).

THANK YOU.
