

PILOT ROBOTIZATION

26 MAART 2018

INSPIRATION

Conference in 2016 on Robotization & Unions

WRR:

“Mastering the Robot – The Future of Work in the Second Machine Age”

People and robots should work together instead of letting robots take over

NEGOTIATIONS

- Employers: Made a first proposal:
 - Let's examine the consequences...
- We made a second one:
 - Co-creation
 - Complementarity
 - Co-ownership...

CO-CREATION

- Do not just “let it happen”
- Robots can make our life and work better
- Automate heavy and boring work, to make room for new activities

COMPLEMENTARITY

- Do **not** underestimate people
- Think about what you **want to** automate
- Which activities **should** be carried out by people?

CO-OWNERSHIP

Autonomy of work

Who owns the robot?

GOAL

- How to incorporate co-creation, complementarity and co-ownership in the proces of robotization in the sector
- Effects on cleaners and on the sector as a whole

But also:

- Being an innovative sector, make cleaning **cool**
- Creating a proces that is about **quality** of work and life, not about cutting costs

CURRI

Battle?

Just a
process?

Invent &
Make?!

- Time horizon: 2025
- Working with an ongoing project plan
- Summer 2017: expectations and visions
- September – Februari: Talking with scientist and developers and cleaning sector
- Starting in March: focus groups
- April – May: ?

All 3 of them!
